---

DS Looker will scan all your Darkstone saved games and give you the name of the computer that has been stored within (between []), so you're able to alter the files to a new computer name.

Contents of the 'readme.txt':

Well, You have reinstalled Windows, and are now wondering what lovely name you have given to your computer last time ? You now realize with horror that you have lost all your DarkStone save games ? Don't bother anymore, DSLooker will help you... Simply put the DSLooker.exe file in the directory you like, open an MSDOS window, step to the DSLooker directory, then launch it ! DSLooker will scan all your DarkStone saved games and give you the name of the computer that has been stored within (between []). Just reuse that name for your new installation (Config Pannel/Network/Identification). If you really want to keep your brand new computer name, use the "-u" option. It will update all your saved games with the current computer name.
